

The SQUINTSTAGRAM™

Fighting COVID-19 Misinformation

SQUINT is receiving misinformation regarding the various homemade COVID-19 cures and vaccines. For example, the two SQUINTs below are examples of vaccines. In the first SQUINT, the poster is advocating various vitamins, mushrooms, and tonic water as a vaccine against COVID-19. In the second SQUINT, the poster is advocating a homeopathic vaccine.

Thuja Vax Vaccinosis Protocol

r/homeopathy · Posted by u/truthuk 22 hours ago
Thuja Vax Vaccinosis Protocol

I could see this generic homeopathic protocol being of great use in this time. For the clearing of the symptoms of Vaccinosis, toxicological and immunological damage as well as the clearing of miasmatic blocks. Very effective in cases of developmental delays.

ThujaVax combination (could be made up easily) :

- Thuja mother tincture in 90% alcohol
- 3-4 drops of Psor, Med, Syph, Tub, Carc all 200C
- 10 drops Silica 9x
- 3-4 drops of vaccine given in 30c potency (if unknown use a disease nosode)

Adjuct treatments:

- Give Constitutional remedy 3x on one rest day a week in 30c potency - unless indicated otherwise.
- Magnesium
- Aloe Vera (open the bowels for detox)
- Vitamin C

- Every should not be suppressed (Only the Forum for

The efficacy of these approaches has not been determined and peer reviewed. For the three COVID-19 vaccines that have been approved for emergency use in the United States (U.S.), the U.S. Food and Drug Administration (FDA) convened the Vaccines and Related Biological Products Advisory Committee which is composed of independent scientist and public health experts. The FDA's career professional staff review the results of Committee to determine if the vaccine should be approved for emergency.

Another set of SQUINTs that we have received recently allege that mouthwash is a cure for COVID-19. This is most likely the result of studies such as the one published here:

<https://www.dentistrytoday.com/news/industrynews/item/7982-mouthwashes-disrupt-the-covid-19-virus>

The study does show that the use of mouthwash can temporarily reduce SARS-Cov-2 (the virus that causes COVID-19) in a person's mouth. It is important to note that the mouthwash does not kill all of the virus, just inhibits it temporarily from being detected in someone's mouth. While this is a risk mitigation for patients undergoing dental or other procedures, it is not a cure for COVID-19.

Recommendations for Communication Efforts

Misinformation surrounding pseudo-cures and at-home remedies for COVID-19 present a serious threat to people's health. To combat this misinformation, the Health Communication Science Team recommends:

- Spotlighting (via social media, town halls, etc.) scientists, researchers, and healthcare professionals who are trusted experts on COVID-19. Incorporate experts who represent a diverse community.
- Emphasizing that anecdotal stories are just stories – the medical research does not support herbal or at-home remedies for COVID-19.
- Reiterating the only known way to protect yourself from COVID-19 is to follow CDC guidelines of washing your hands frequently, avoiding sick people, follow social distancing guidelines, and receiving the FDA-approved COVID-19 vaccines from a healthcare professional.
